Application No.: 09/354,080

Attorney Docket No.: 09952.0026-00

Express Mail No. EM 072683370 US

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the

application:

Listing Of Claims:

Please amend the claims as follows:

Claim 1 (Currently Amended) A method for the controlled delivery of digital

services by a plurality of providers to a user, wherein said services are identified by

respective stream of encoded digital data emitted by said plurality of providers and the

user is provided with a receiver and a single user unit to receive said digital data

streams by said plurality of providers, the receiver being selectively enabled selected to

make use of determined services of a given provider of said plurality, the method

comprising the steps of:

incorporating by each of said plurality of providers into said digital data

streams a respective enabling algorithm generated by the provider and specific of the

provider for enabling the use of respective determined services of said plurality of

providers,

incorporating into said digital data streams respective identifying codes of

selective users to be enabled to receive said determined services,

-2-

Express Mail No. EM 072683370 US

selectively loading said enabling algorithm of at least two of the plurality of providers in said digital data streams into the user unit of at least one of the selective users based on the respective identifying codes so that and wherein said enabling algorithms of at least two of the plurality of providers are concurrently available on the user unit for enabling the at least one of the selective users to make use of said respective determined services of said at least two of the plurality of providers, and

associating to said user unit a processing function capable of for recognizing and executing said enabling algorithm based on said identifying codes to enable for the receivers of the selective users to make use of said respective determined services of said plurality of providers.

Claim 2 (Previously presented) The method according to claim 1, which comprises the step of configuring said single removable user unit as a movable processing support uniquely assigned to said users.

Claim 3 (Previously presented) The method according to claim 1, which comprises the step of configuring said single removable user unit as a smart card.

Claim 4 (Previously presented) The method according to claim 1, which comprises the steps of:

Express Mail No. EM 072683370 US

associating to said receiver a trusted middleware function,

configuring said trusted middleware function into a static part, residing on said receiver, and a dynamic part arranged to be selectively transferred onto said single removable user unit in view of the execution of said respective enabling algorithm by said processing function.

Claim 5 (Previously presented) The method according to claim 1, which comprises the steps of:

configuring said digital data streams as MPEG data streams containing EMM messages,

inserting said identifying code in to the EMM messages,

activating, through said single removable user unit and upon reception of said respective enabling algorithm, the performance of the following functions:

extracting, reading and deciphering the EMM messages contained in the digital data stream received,

interpreting said identification code contained in the EMM messages, executing said enabling algorithm by exploiting said identification code.

Express Mail No. EM 072683370 US

Claim 6 (Original) The method according to claim 1, wherein said respective enabling algorithm is incorporated in to a stream of private data within said digital data

stream.

Claim 7 (Currently Amended) The method according to claim 1, wherein upon

reception of said enabling algorithm, said processing function enables causes said

receiver to operation as transmitters to transmit information about the delivery of the

service itself.

Claim 8 (Currently Amended) A system for the controlled delivery of digital

services by a plurality of providers to a user, wherein said services are identified by

respective coded digital data streams and the user is provided with a receiver and a

single removable user unit to receive said digital data streams delivered by said plurality

of providers, the receiver being selectively enabled selected to make use of respective

determined services of a given provider, wherein:

each of said plurality of providers is arranged to incorporate into said

digital data streams respective enabling algorithm generated by the provider for

enabling use of using said respective determined services of said plurality of providers,

as well as respective identification codes of selective users to be enabled to receive

said respective determined services, wherein the respective enabling algorithm of at

least two of the plurality of providers in said digital data streams is selectively loaded

-5-

Express Mail No. EM 072683370 US

into the user unit of at least one of the selective users based on the respective

identification codes so that and wherein said enabling algorithms of at least two of the

plurality of providers are concurrently available on the user unit for enabling the at least

one of the selective users to make use of said respective determined services of said at

least two of the plurality of providers, and

said single removable user unit has associated thereto a processing

function arranged to recognize and execute said respective enabling algorithm on the

basis of said identifying code, to enable the receiver of the user to make use of said

respective determined services of said plurality of providers.

Claim 9 (Previously presented) The system according to claim 8, wherein said

single removable user unit is configured as a removable processing supports uniquely

assigned to said user.

Claim 10 (Original) The system according to claim 8, wherein said single

removable user unit is configured as a smart card.

Claim 11 (Previously presented) The system according to claim 8, wherein:

-6-

Application No.: 09/354,080

Attorney Docket No.: 09952.0026-00

Express Mail No. EM 072683370 US

said receiver have associated thereto a trusted middleware function

configured in a static part, residing on said receiver, and in a dynamic part arranged to

be selectively transferred on the single removable user unit in view of the execution of

said respective enabling algorithm by said processing function.

Claim 12 (Previously presented) The system according to claim 8, wherein said

service providers emit said digital data streams as MPEG data streams containing EMM

messages with said identifying code inserted in said EMM messages, and said receiver

comprises:

modules for extracting, reading and deciphering the EMM messages

contained in the received digital data stream,

modules for interpreting said identifying code contained in the EMM

messages, and

processing modules to execute said at least one respective enabling

algorithm on the basis of said identifying code.

Claim 13 (Original) The system according to claim 8, wherein each of said

plurality of providers incorporates said respective enabling algorithm into a stream of

private data within said digital data streams.

-7-

Express Mail No. EM 072683370 US

Claim 14 (Previously presented) The system according to claim 8, wherein the

receiver can be activated by said single removable user unit upon reception of said

respective enabling algorithm for operation as a transmitter to transmit information

about the delivery of the service itself.

Claim 15 (Previously presented) The system according to claim 8, wherein said

single removable user unit is configured as a Java Card.

-8-
